BPE Office Device Tracker

Bureau of Public Enterprises, Abuja — ICT Unit Project Guide & Kid-Simple Walkthrough

1. The Secret Keys (Login Details)

There are two keys to enter the clubhouse, depending on who is logging in:

■ **Boss Key (Admin)**	**Username:** admin **Password:** Admin@123	Full access. Can view, add, edit, and throw away (delete) old gadgets.
■■ **Helper Key (Staff)**	**Username:** staff **Password:** Staff@123	Operational access. Can view, add, and move gadgets. **Delete is blocked!**

2. How to Use the Device Tracker (Like a Fun Game!)

Step 1: Open the Clubhouse Door (Login)
Go to http://localhost:5173. Type your secret key, or tap the helper demo buttons on the page to auto-fill them.

Step 2: Check the Scoreboard (Dashboard)
See the big numbers of all 20 devices. Look at the 'Action Required' list to spot devices with a boo-boo (Faulty or Under Repair) so you can fix them!

Step 3: The Big Toy Chest (Devices Directory)
Click 'Devices' on the left menu. You can search by device name, person, or room. Tap 'Export CSV' to download the entire list into an Excel file.

Step 4: Putting a New Toy in the Chest (+ Add Device)
Tap the '+ Add Device' button. Give it a name, room, and a special Asset Tag sticker (like BPE-ICT-001). No two toys can have the same sticker!

Step 5: Moving or Fixing Toys (Edit & Audit Diary)
When John takes a laptop to Office 305, click Edit and type the new room. A tiny digital detective records in a diary who moved it, what was changed, and what time!

3. How Was It Coded? (The 3 Best Friends)

The software was built like three friendly helpers working together:

■ **The Face (Frontend)**	**React + Vite:** The pretty picture, buttons, cards, and charts you click on. It runs instantly without reloading the page.
■ **The Messenger (Backend)**	**Express.js (Node.js):** Runs between your screen and database. It checks your secret badge (JWT) and stops Staff from deleting things.
■ **The Big Memory Notebook (Database)**	**SQLite (better-sqlite3):** A file stored on your PC (devices.db) that never forgets anything, even when the computer is turned off.

4. Project File Location

Project Folder Path:
C:\Users\USER\.gemini\antigravity\scratch\device-tracker
